INDEX.

A

Achromatic Telescopes, on large ones made in France, 364.
Adriatic, tour to the coast of the, 82, 259.
Albite, on its form and composition, 196.
Anorthite, on its form and composition, 196.
Ambres, on the characters of, 196.
Analcime, on a new species of double refraction in, 255.
Antiquarian Society of Scotland, proceedings of, 356.
Apatite, on the series of crystallisation of, 140.
Apparitions, notice of Dr Hibbert's work on the philosophy of, 378.
Arbury Hill, on an anomaly in the observations at, 181.
Astronomical observations at Paramatta, 244.
Atmosphere of seas, on its chemical nature, 367.
Aurora Borealis in Iceland, 366.
Avogardo, M. Le Chevalier, on the determination of the masses of molecules of bodies, 190.—on organic compounds, 191.

B

Barnes, Dr, his account of Mary Noble in the 107th year of her age, 125.
Bees, observations on, by Rev. Mr Dunbar, 22.
Berzelius, M., on new ingredients in mineral waters, 369.
Bessel, M., on a reported inaccuracy in his catalogue, 180.
Beudant's opinions on certain rocks examined, 67.
Boué, Dr, on Beudant's opinions regarding certain crystalline rocks, 67.
Brazilian Forests, notice of an engraving of one, 384.
Brewster, Dr, on a monochromatic lamp, 120.—on a new species of double refraction in analcime, 255.
Brinkley, Rev. Dr, his tables relative to the southern motion of the fixed stars, 178.—on the elements of the comet for 1823 and 1824, 363.
Brisbane, Sir Thomas, on the pendulum, 181.—on the mean temperature of the earth at Paramatta, 219.—his astronomical observations at Paramatta, 244.
Brunel, Mr, on a new plan of tunnelling, 276.

C

Cadachio, description of a temple at, 234.
Cagnard de la Tour, Baron, on the vaporisation of fluids, 194.
Cambridge Philosophical Society, proceedings of, 172, 359.
Cameron, Mr Charles, his new soda water apparatus, 222.
Canal of Petit, Dr Knox's observations on its structure and functions, 323.
Cassowary Emeu of New Holland, its structure described by Dr Knox, 132, 137.

Caverns, on the low temperature of particular ones, 112.
Celestial Phenomena from January 1. to April 1. 1824, 167.—from April 1. to July 1. 1824.
Chalcedony, on the formation of, 348.
Charcoal from different woods, 383.—on its fusion, 193.
Chili, earthquake in, described, 56.
Chinese year, 201.
China, on the introduction of vaccination into, 201.
Chronometers, on the influence of magnetism on their rates, 1, 342.
Clarac, Count, on an engraving of a Brazilian forest, 38.
Cobeaceæ, on a new natural family of plants so called, 109.
Comet of September 1822, 179.—of 1823 and 1824, its elements according to different astronomers, 361.
Comparative Anatomy of the eye, Dr Knox's observations on the, 338.
Coppering of ships, Sir H. Davy's method of preventing its corrosion, 369.
Cormack, Mr, his journey across Newfoundland, 156.
Cumming, Professor, on the relative polarities of the metals, as developed by heat, 175.—His tables on thermo-electricity, 185.

D

Danish Provinces, on the vegetation of, 162.
D'Assas, Count, on the parallax of the fixed stars, 325.
Davy, Sir H. on a new phenomenon in electro-magnetism, 185.—on the corrosion of the coppering of ships, 369.—on a simple method of liquifying the gases, 191.—on the expansion of gases of different densities, 192.
Davy, Dr John, on the specific gravity and temperature of the sea, 317.
Dispersive Powers of different kinds of glass, 26.
Döbereiner on the action of hydrogen on the sub-oxide of Platina, 153.
Dog, domestic, on its origin, 376.
Don, Mr David, on the Cobeaceæ, 109.
Double Stars, observations on, by M. Struve of Dorpat, 102, 331.
Dunbar, Rev. Mr, on bees, 22.
Dunn, Mr, on a whirlwind at Scarborough, 11.

E

Earth, on an anomaly in its figure, 179.
Earthquake, of 1822, in Chili, described, 56.—felt at sea, 378.—effects of one on the vegetation of wheat, 382.
Electricity produced by separation of parts, 185.
Electro-Magnetism, on a new phenomenon in, 185.—account of some new one, 130.
Epidote, on its series of crystallisations, 305.
Eye, comparative anatomy of the eye, 338.

F

Fallows, Mr, on unusual parhelia seen at the Cape, 363.
Felspar, on its forms and compositions, &c. 196.
Field-Mice, on their migration, &c. 373.
Fixed Stars, on a method of investigating their parallaxes, 325.
Fleming, Rev. Dr, his gleanings of natural history on the coast of Scotland in 1821, 95.

Fluids, on the vaporisation of, 194.
Fossil, on one that has the smell of truffles, 370.
Foster, Mr H. account of his experiments on the invariable pendulum, 181.
Frauenhofer, M. on the refractive and dispersive power of different kinds of glass, 26.
Frembly, Mr, on the temperature of the Frith of Forth, 190.

G

Galbraith, Mr, his new stereotyped mathematical tables, 383.
Galvanic experiment, on one of a paradoxical character, 205.
Gases, on a simple method of liquifying, 191.—on their expansion at different densities, 192.—on the specific heat of, 351.
——— on a simple method of experimenting on, by means of bent tubes, 52, 251.
Gerard's, Messrs A. and J., tour through the Himalaya Mountains, 18, 295.
Glass, on the refractive and dispersive power of different kinds of, 26.
——— its purple colour increased by light, 364.
Glauber-Salt, on its series of crystallisation, 305.
Gleanings, of natural history, during a voyage along the coast of Scotland, in 1821, 95.
Gold crystallised, from its solution in sulphuric æther,
Goldingham, Mr, on his experiments on the velocity of sound, 182.
Granite for London Bridge, 201.
——— secondary, 374.
Gregory, Dr, on the velocity of sound, 182.
Greville, Mr R. K., on a stone-axe, 357.
Greywacke of the Apennines, 371.
Griffith's, Mr, his test-paper for acids and alkalies, 369.

H

Haidinger, Mr, on the series of crystallisation of apatite, 140.—on felspar, albite, &c. 198.—on the sulphato-tri-carbonate of lead, 286.—on epidote and glauber-salt, 305.
Hall, Captain Basil, account of his experiments near the equator, with an invariable pendulum, 181.
Hamilton, Dr Francis, on two maps of Zænmæ and Yangoma, 59.—on a sketch of Koshanpri, 246.
Hansteen, Professor, on remarks during a Tour from Christiania to Bergen, 207.
Harvey, Mr George, on the influence of magnetism on the rates of chronometers, 1, 342.—on a remarkable case of magnetic intensity, 349.
Haycraft, Mr, on the specific heat of the gases, 351.
Heat, account of a great one at New South Wales, 188.
Heat and Motion, on the effects of, 280.
Hibbert, Dr, on the philosophy of apparitions, 381.
Himalaya Mountains, on the height of, 18.—account of a tour to them, 285.
Hopeite, a new mineral described, 348.
Hoppe, Dr D., his botanical tour to the coast of the Adriatic, 82.

Horneman, Professor, on the vegetation of the Danish Provinces, 162.
Hornschuch, Dr H., his botanical tour to the coast of the Adriatic, 82.
Humboldt, Baron, on Rock Formations, 40.—224.
Humboldt's Geognosy, a new edition of, 371.
Hydrioduret of Carbon, 368.
Hydrogen, its action on the suboxide of platina described, 153.
Hydro-thermometrical observations made in the Frith of Forth, 189.

I J

Innes, Mr George, his new tide-tables, 383.
Innes, Mr George, on the celestial Phenomena, from January 1. to July 1. 1824, 167.
Inscriptions ancient, found on sheets of lead, 379.
Iron, native, found in Bogota, 372.
James's Powder, on its composition, 193.
Jupiter's Satellites, observations on the eclipses in 1820, 1821, and 1822, as made at Greenwich, 363.

K

Kerr, Mr William, on a simple method of experiments on small quantities of gases, 53.—251.
Knox, Dr Robert, on the structure of the Cassowary of New Holland, 132, 137.—on the canal of Petit and the marsupium nigrum.—on the comparative anatomy of the human eye,—on the Ornithorynchus paradoxus, 172.
Koshanpri, account of a map of, 246.

L

Labradorite, on its form and composition, &c., 196.
Lamp, a monochromatic one described, 120.
La Place, M. on double refraction, 329.
Lestiboudois, M. on the structure of the Monocotyledones, 372.
Lloyd, Captain, on the heights of the Himalaya mountains, 18.

M

Macgillivray, Mr, on the Genus Larus, 358.
Mackenzie, Sir George, on Chalcedony, 348.—on the fossil vertebra of a whale, ib.
Magnetism, on the influence of, on chronometers, 1, 342.
Magnetism of Titanium, Cobalt and Nickel, observations on it, 183.
Magnetic Needles, tables of its variation, 116, 285.
Maize, on the duration of its germinating power, 382.
Maps of Zœnmœ or Yangoma, account of two, 59.
Marsupium nigrum, Dr Knox's observations on its structure and functions, 323.
Masses of the Molecules of bodies, on their determination, 190.
Metals, on the polarities, as developed by heat, 175.
Mineral waters, a new ingredient discovered in them, 369.
Monochromatic lamp, description of one for microscopical purposes, 120.
Monocotyledones, 372.
Morison, Major, on the woodcock, 198.

N

Naples, notice of a tour in, 380.
Needle, magnetic, account of Mr Barlow and Mr Christie's experiments on the diurnal variation of the, 184.
Newfoundland, account of Mr Cormack's journey across, 156.
Noble, Mary, notice of, in her 107th year of her age, 125.
Nyevelt, Baron, on some New Electro-magnetic Phenomena, 130.

O

Oersted, Professor, on a paradoxial galvanic experiment, 205.
Organic compounds, on the theory of, 191.

P

Parhelia seen at the Cape, of a singular and inexplicable kind, 362.
Patents, list of Scottish, 203.
Pendulum, account of Captain Hall and Mr Foster's experiments with an invariable one, 91.—account of Sir Thomas Brisbane's experiments with one, 181.
Perkins's steam-engine, farther information respecting it, 367.—his steam-guns, 367.
Platina, on remarkable properties of the suboxide of, by M. Dobereiner, 153.
Plumbago, on its fusion, 193.
Power, account of a new one, 222.
Proceedings of the Royal Society of Edinburgh, 168, 353.—of the Wernerian Society, 170, 355.—of the Cambridge Philosophical Society, 172, 359.—of the Society of Scottish Antiquaries, 357.
Pyrophorus, on a new one made of tartrate of lead, 368.

R

Refractive power of different kinds of glass, 26.
Rock-formations, Baron Humboldt on, 40, 224.
Roe, Mr Samuel, on a newly discovered temple in Corfu, 239.
Rose, M. on felspar, albite, labradorite, and anorthite, 196.
Royal Society of Edinburgh, proceedings of, 168, 368.

S

Salmon-fisheries in the Tay, 374.
Sea, on the specific gravity and temperature of the, 317.
Seas, on the atmosphere of, 367.
Sedgwick, Professor, on the trap-rock and the mountain limestone formations in High Teesdale, 173.
Seguin, M. on the effects of heat and motion, 280.
Siwright, Mr, on the crystallisation of gold from its solution in sulphuric æther, 193.—on the fusion of plumbago and charcoal, 194.
Sliding-rule, notice of an improved one, 382.
Smith, James, Esq. on a vitrified fort, 347.
Soda Water apparatus, description of Mr Cameron's new one, 222.
Sound, experiments on the velocity of, by Mr Goldingham, 182.—by Dr Gregory,
Sounds, on the influence of, on the elephant and the lion, 364.
Spectrum, prismatic, on the intensity of the light in different parts of it, 33.

XUM

Stars, on their southern motion, 177.
Steam-engine, Perkins's, 365.
Steam-guns, proposed by Mr Perkins, 367.
Steel, on a method of cutting soft iron, 202.
Struve, M. of Dorpat, on double stars, 102, 331.—on the parallaxes of stars, 361.
Sulphato-tri-carbonate of Lead, on its forms of crystallisation, 286.
Sulphur, melted, on the form of crystallisation of, 370.

T

Temperature, mean of London for 1822, 186.—of the Canaries, 187.—of springs in Beauvois, ib.
Temperature of particular caverns, on the cause of its depression, 121.
Temple, on a newly discovered one, in Corfu, 239.
Test-paper for acids and alkalies, 271.
Thermo-electrics, Professor Cumming's table of, 185.
Tide-gauge, on a new one, 363.
Tide table, Mr Innes's new ones, 383.
Transactions of the Royal Society of Edinburgh, analysis of Vol. X. Part I. 346.
Tunnelling, on a new plan of, 276.

U V

Uranium, on the reduction of, 369.
Variation of the needle in France, 116.—in Great Britain, 118.—in Portugal, Spain and Italy, 119.—in Turkey, 120.—in Asia, 283.—in Africa, 285.
Vitrified Fort in the Kyles of Bute described, 347.
Vogel, M. on the atmosphere of seas, 367.

W

Wallace, Professor, on formulæ for the logarithms of trigonometrical quantities, 349.—on an improvement in the solution of a case in plane trigonometry, 350.
Water-spout in France, on a remarkable one that occurred there, described, 365.—near Genoa, 366.
Wernerian Society, proceedings of, 170.
Whewell, Mr, on a formula for the angle between two places, 362.
Whirlwind, description of one near Scarborough, 11.
Woodcock, observations on the, 198.
Wollaston, Dr, on the magnetism of titanium, cobalt, and nickel, 183.—on the double refraction of Iceland-spar, 328.

Y

Young, Dr Thomas, on an improved sliding-rule for gauging casks, 382.

Z

Zænmæ or Yangoma, account of two maps of, 59.

P. Neill, Printer.

XUM
